

Baumit. Ideas with a future

Baumit CreativTop opens up unlimited possibilities for the creative design of façades. This results in individual structuring options for unique surfaces. From classic render structures to unusual wood and concrete looks.

- Endless design possibilities
- Particularly low in pollution
- Creative, colourful and unique finishes

#### Visuals you can feel

Coloured and ready to use, Baumit CreativTop invites you to creatively design unique facades. With Baumit CreativTop, craftsmanship is given modern opportunities to present old structures and techniques in a contemporary way. Thanks to its diverse design options, this puts the focus back on craftsmanship and thus becomes a tool of the craftsman.

Anyone who appreciates the almost unlimited possibilities of the Baumit Life colour system will be even more enthusiastic about Baumit CreativTop. Exterior walls not only look individual by choosing the right colour, but also feel individual.

Fascinating looks for EWI

Replicate the style of countless materials with Baumit CreativTop. Baumit EWI systems and individual designs are therefore technically low-maintenance and can be implemented in practically any style.

The five available grain sizes from Max to Silk enable unique results:

- Baumit CreativTop Max (trickle throw optics) - Baumit CreativTop Trend (max. particle size 3 mm)
- Baumit CreativTop Fine (max. grain size 1 mm)

- Baumit CreativTop Pearl (max. particle size 0.5 mm)

- Baumit CreativTop Silk (max. particle size 0.2 mm)

#### **Drypor Effect**

Baumit CreativTop comes with a formulated innovative filler, which, like a coral, has a very large surface and penetrates an extremely fine microstructure which causes the Drypor effect. This results in rapid drying due to raindrops beading off it, absorption of moisture from dew and rapid re-drying of the surface. Additionally, this ensures particularly low-soiling facades and provides an increased protection against algae and mushrooms.

## **Shades of White**

Baumit CreativTop is also available in the "Shades of White" colour line. Building on the Baumit Life range, an additional 12 unique shades of white were developed to enable creativity in the world of white as well.

#### Baumit CreativTop

Ready-to-use, silicone resinreinforced modelling render for outside for creative façade layout.

Available in Baumit Life Shades - see pages 19-21. Consumption is dependant on the application technique used.

Form of delivery: Bucket 25 kg

**Baumit CreativTop** 

## **Structure & Character**

Structure gives a façade its unmistakable character. The alternation of rough and smooth and seemingly different materials, which can be produced so cheaply, easily and low maintenance, is now almost unlimited.

Baumit CreativTop enables the implementation of creative and innovative processing techniques to achieve unique surfaces.

As this is high quality craftsmanship, slight differences in the finished surface are possible, especially when using multiple craftsmen. The processing techniques listed should serve as ideas and inspiration for individual techniques!

Baumit CreativTop is a processing finished, ready to use, silicone resin reinforced modeling render for outdoor creative facade design. Available in all Baumit Life colours with black numbers; (Max, Trend and Fine also with blue digits). The consumption depends on the processing technique! Observe the product data sheet!

For special refinement and effective full colouring, Baumit effect coatings are used. A special glittering of the facade or a metallic shine ensures unique and unmistakable facades.

**Baumit Effect Coatings** 

Shimmering, metallic or glittering effects on the facade. Thanks to the use of innovative technologies, even more elegant and unique accents on your facade are possible with Baumit effect coatings. This is the world of Baumit glaze, glitter and metallic.

#### Metallic - for an elegant shine

Designs with Baumit Metallic attract everyone's attention. The extraordinary colours can be creatively combined. Shiny metallic accents make every house unique. With Baumit Metallic, the facade will definitely be an eye-catcher, whether used extensively or only as an accent.

#### Glaze - unmistakable design

Baumit Lasur is a ready-to-use coating for decorative wall and facade design outdoors. With its matt formula, this glaze is particularly suitable for renovating old surfaces in a suitable style as well as for the harmonious refinement of modern facades. Ideal for unconventional individual facades.

Shine 725L Sensual 726L Impulse 727L Gentle 728L Solid 729L

#### Glitter - a touch of sparkle

Glitter is a transparent, dispersion-based coating with metal glitter. There is a choice between golden, silver and iridescent metals, with a finer or somewhat coarser look. Depending on the incidence of light, the facade always gets a different look.

After standing for 24 hours\* roughly sand the surfaces and joints with 16-grit sandpaper.

After hardening, the joints are reworked again with sandpaper so that in the finished appearance even joint dimension

After the CreativTop Pearl has dried for at least 24 hours\*, apply a single coat of Baumit StarColor (diluted 20% with water) in shade 0927 or 0447. Processing is either wet-on-wet across the field or seamlessly from joint to joint.

Finished concrete look.

## **Wood In Colour & Structure**

Real wood on the facade quickly becomes unsightly. With Baumit CreativTop you create deceptively real wood looks on the facade - and that also low maintenance. Wood look in a wide variety of colour and structure nuances combined with an efficient Baumit insulation system.

Notice:

Baumit SilikonTop K 1.5 is applied and rubbed in over the entire surface with a stainless steel trowel. After a standing time of 24 hours\*, the surface is roughly sanded with 16-grit sandpaper...

If you can process in one step, depending on the number of applicators, weather conditions and local conditions. In the event of work interruptions mask off the joint pattern accordingly. Alternatively, the joint can also be emphasized (e.g. by structuring with an H Rule).

...and removed with a sponge board.

After a sufficient drying time of the **Baumit** CreativTop Silk of at least 24 hours\*, Baumit Glaze is finally applied in the defined colour using a lambskin roller...

...and lightly wiped away with a glaze brush. The job can be done wet on wet, as well as be done on the dried glaze.

Depending on the desired tint of the wood look, a combination of different Glaze colours are provided. It should be noted here that the actual colour only changes developed after complete drying. Test areas are therefore in deviating colour tones mandatory to create.

8

After a standing time of 24 hours\*, another layer of Baumit CreativTop Silk is applied in the required layer thickness. Right after structure with a wood grain painting tool. In addition, the surface can be decorated with imitation knots and nails.

Depending on the structure intensity, any burrs that have formed are removed and/ or ground over after the Baumit CreativTop Silk has dried sufficiently.

Next, Baumit PuraColor is rolled up undiluted in the defined colour on the surface and without pressure with a small amount of material using a foam roller...

Baumit CreativTop

## **New Trend In Rust**

The special industrial charm of rusty metal on the facade is particularly popular with architects and artists because it looks warm and rough at the same time. Now there's a cost-effective, weatherproof, and heat-efficient alternative to real metal: Baumit CreativTop in a natural rust look convinces with earthy, slightly changing colours and total freedom from maintenance.

- Notched trowel
- Pressure sprayer
- Plastic film
- Lambskin roller
- Glaze brush

#### Notice:

A field test should be conducted prior to full system application to ensure suitability with local environment conditions.

#### Material

RUST LOOK		
Baumit CreativTop Fine	0019	ca. 3.1 - 3.6 kg/m²
Baumit Metallic	755M	ca. 0.30 - 0.35 l/m²
Baumit Lasur	730L	ca. 0.08 - 0.1 l/m²
OPTIONAL		
Baumit Lasur	726L	ca. 0.08 - 0.1 l/m²
Baumit Lasur	735L	ca. 0.08 - 0.1 l/m²

Baumit CreativTop Fine in colour 0019 applied to the substrate, combed through with a stainless notched trowel (teeth 8 mm) and then smoothed. This achieves an even layer thickness of approx. 2 mm.

Immediately afterwards, the surface is completely wetted using a pressure sprayer.

After a sufficient drying time of the Baumit CreativTop Fine of at least 24-48 hours\*, Baumit Metallic in colour shade 755M is applied to cover the entire surface using a cross coat with a lambskin roller.

In order to avoid rolling marks, the surface is brushed off immediately after application of the Baumit Lasur or textured with a sponge board.

In a further step, cover the surface with plastic and rolled over with a lambskin roller and pressed. The film is then removed again. The resulting air pockets help imitate a rusted surface.

After a standing time of at least 12 hours\*, Baumit Lasur in colour shade 730L is applied over the entire surface. In addition, accents can be set using Baumit Lasur in colour shade 726L and/or 735L.

Finished rust look.

## **Creative Sandstone Texture**

This creative facade design underlines architectural features and gives a building a very special external effect, but what about maintenance and design options? Low-maintenance and with almost unlimited possibilities, Baumit CreativTop creates the impression of natural sandstone with individual charm.

- Steel trowel
- Plastic float

the joint plan in the desired joint width. The sand the surfaces and joints with 16-grit use of an H Rule with the help of a plastic float is recommended here.

Then the grain structure is covered with Baumit CreativTop Pearl in colour shade 0217 almost completely filled without taking into account the pre-jointed joints and rubbed down smoothed again with light pressure or rubbed in with a steel trowel. Defects or air voids contribute to the imitation of a sandstone surface.

again using a plastic float.

...immediately wipe away with a glaze brush.

Apply Baumit Lasur in colour 735L...

Optionally, shading or setting accents can be done using Baumit Lasur in the colours 730L, 726L or 732L.

sandpaper.

After stiffening, the joints are restructured

After standing for 24 hours\* roughly sand the surface and the joints with 16-grit sandpaper.

Finished sandstone look.

## **Structure With A Broom Finish**

The surface of the building is given a unique effect with this technique running either horizontally or vertically.

# **Classic Slurry Technique**

A classic variant of facade design is plaster. Historical plasters in particular are currently experiencing a veritable renaissance. In connection with insulation systems, render is indispensable. The possibilities are now unlimited, mastery more in demand than ever.

Baumit CreativTop Fine

Baumit CreativTop Fine is supplied in the desired shade applied to the substrate in grain size.

shade in grain strength on the substrate

After sufficient drying, another layer of Baumit CreativTop Fine is applied and combed through with a stainless notched trowel (teeth 8 mm) and roughly smoothed off if necessary.

Immediately afterwards, the surface is structured using a broom. A field delimitation is to be carried out if, due to the local conditions, there is no uninterrupted structuring of the total area can be done.

Baumit CreativTop Trend

ca. 3.2 - 3.7 kg/m<sup>2</sup>

ca. 3.5 - 4.0 kg/m<sup>2</sup>

...and structured with a broom.

Finished broomstick optics.

Baumit CreativTop Trend comes with a stainless steel trowel applied over the entire surface. The layer thickness results desired. from the desired structure, but should not exceed 5 mm. When using Baumit CreativTop Fine or CreativeTop Pearl, the surface is previously treated with Baumit SilikonTop K 1.5 plastered.

#### **Baumit CreativTop**

The still fresh CreativTop comes with a

Then the still fresh, but already slightly worn surface is slurried with a damp painter's brush or a damp sponge. This flattens the existing burrs.

Coarse structures, rough surfaces in contrast to modern architecture or in connection with traditional construction bring excitement and liveliness to the façade.

Baumit CreativTop Max

ca. 8.0 - 9.0 kg/m<sup>2</sup>

**Baumit CreativTop Max** is applied crosswise evenly to the substrate. A field delimitation is to be implemented if, due to the local conditions, no uninterrupted structuring of the entire area can take place.

After 12 hours apply a second layer of CreativTop Max.

One layer will be applied horizontally, the other vertically.

Finished spray technique.

#### **HINTS & TIPS**

#### Service life:

The stated service lives refer to an ambient temperature of +20°C and 60% relative humidity. Drying can be significantly delayed, particularly at higher humidity levels. moisture to be reabsorbed.

#### Fresh in fresh:

The second layer of render is applied to the first layer of plaster that has dried and is already stable. The time interval between the application of the first and second layer of plaster depends on the substrate and the weather.

#### Minimum layer thickness:

When using the CreativTop products on EWI, a minimum layer thickness of 1.5 mm is required, for structures with indentations (e.g. grooves) of at least 2 mm required.

#### Colour fastness of Life colours in the brochure:

The samples shown serve as a colour guide for the selected product. An absolute colour match with the delivered material cannot be guaranteed.

## The right colour for every façade!

# Baumit Life Colour System

The Baumit Life colour system guarantees the right colour for every need. The colour fan has been expanded to include 180 new colours so that the latest trends in façade design are represented. Years of experience and style research form the basis for this enhancement.
